SUMMARY

Computer Science background with experience in supporting real-time interactive systems, data logging, and operational workflows across research and production environments. Known for clear documentation, calm communication under pressure, and strong interest in production pipelines, system reliability, and supporting artists and technical teams.

EXPERIENCE

HCI Research Assistant (XR Systems)

UBC Okanagan – Human-Computer Interaction Lab

Jun 2025 – Sep 2025

Kelowna, BC & Remote

- Engineered and maintained a real-time VR to large-curved-display collaboration system in Unity/C#, prioritizing system stability and responsiveness.
- Integrated motion capture and unified input handling across VR and non-VR systems for consistent spatial interaction.
- Implemented structured logging using Firebase Realtime DB to capture latency, task performance, and user interaction data.
- Produced clear technical documentation to support system hand-off and cross-team collaboration.

Technical Assistant / Frontend Engineer (Capstone Project)

UBC Okanagan – Software Engineering Capstone

May 2025 – Aug 2025

Kelowna, BC

- Supported development of a role-based TA management platform with emphasis on workflow reliability and predictable system behavior.
- Implemented multi-step application workflows and dashboards using React (Vite) with Django/MySQL in Dockerized environments.
- Identified and resolved blocking issues affecting data flow, validation, and user submissions.
- Tested components using Jest and React Testing Library to reduce failure cases and improve error handling.

Infection Control Screener

Lions Gate Hospital

Jul 2020 – Aug 2021

North Vancouver, BC

- Supported frontline hospital operations in high-pressure, time-critical environments during COVID-19.
- Maintained operational flow through clear communication, rapid issue escalation, and adherence to procedures.

PROJECTS

Wings of Legacy | Unity, C#, Blender

- Developed an atmospheric third-person flight prototype focused on responsive motion and camera behavior.
- Implemented hover, acceleration, and directional steering with documented movement logic.
- Modeled, rigged, and animated assets in Blender for a polished vertical slice.

Game of Amazons AI | Java, Minimax, Alpha-Beta

- Built a competitive game-playing AI using alpha-beta pruning and a Voronoi-based territory evaluation heuristic.
- Optimized evaluation logic for stability and draw avoidance; placed 3rd in course tournament.

EDUCATION

University of British Columbia Okanagan

B.Sc. in Computer Science

Kelowna, BC

Sep 2019 – Aug 2025

BrainStation

Diploma in Web Development

Vancouver, BC

Apr 2023 – Jun 2023

TECHNICAL SKILLS

Languages: JavaScript, Java, C#, SQL, HTML/CSS

Frameworks / Engines: Unity, React, Django, Node.js, WebGL, CUDA

Systems / Tools: Docker, Firebase Realtime DB, Git, Vite, Jest, React Testing Library, GitHub

Operational & Pipeline Skills: logging and diagnostics, workflow validation, system monitoring, automation scripting, issue escalation

Design & 3D: Blender, Figma, UX research, interaction design
